HT Shuttle

The HT was designed for high throughput labs that need to transfer a large number of plates from one workstation to the next. The design prevents spilling and dropping of compounds. The transport can hold 10 cassettes allowing the fast transportation of up to 430 000 compounds at one time.

The seamless design allows for easy decontamination preventing contamination during transportation. Every cassette manufactured by LiCONiC fits this unit so there is no need to change design when your assays change.

Specifications

Design:	Trolley Baseplate with 10 Stacker clips	Stainless Steel Stainless Steel
Capacity:	2 rows of 5 Stacker	
Wheels:	Air pumped tires	
Cover:	Hinges Pneumatic support
